

Workshop: Web Development Fundamentals

Frontend Development

Day 1: Structure & Styling (HTML & CSS)

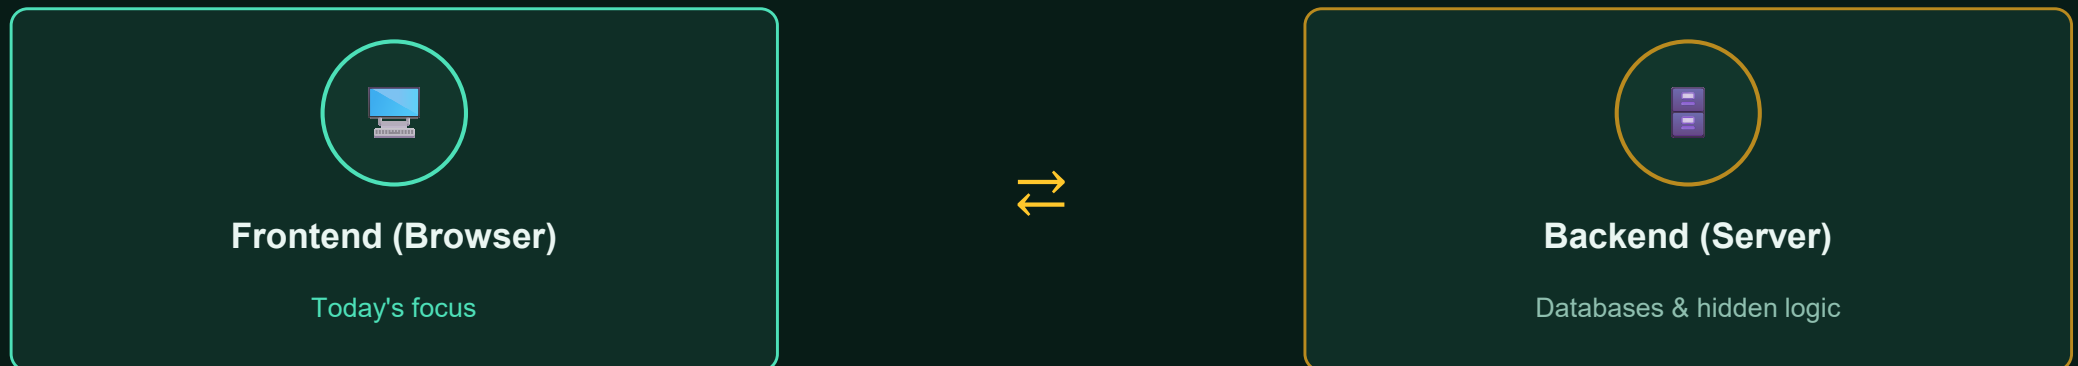

Prepared & delivered by the Cipher team

First.. what is "the Web"?

Frontend vs Backend

- Any website or app you use is built from two core layers: Frontend and Backend.
- Frontend: everything you see and interact with inside the browser.
- Backend: the part running behind the scenes — servers and databases.

So, what is Frontend, exactly?

- Frontend is everything you see and interact with inside any website or app.
- It's built with three core languages: HTML, CSS, and JavaScript.
- Today we'll focus on HTML and CSS, then continue with JavaScript tomorrow.

HTML = Structure • CSS = Finishing • JS = Behavior

So, what does HTML do?

HyperText Markup Language

- It's the foundation — the bricks and cement of any website.
- Without it, a website has no structure or content at all.
- We use it to add the site's core elements:

We use HTML to add:

Text

Images

Buttons

Links

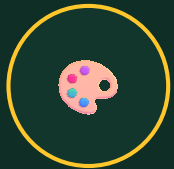

And what does CSS do?

Cascading Style Sheets

- It's the finishing, decor, and colors of the site.
- It turns the structure we built with HTML into something polished and organized.
- We use it to control:

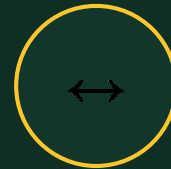

We use CSS to control:

Colors

Fonts

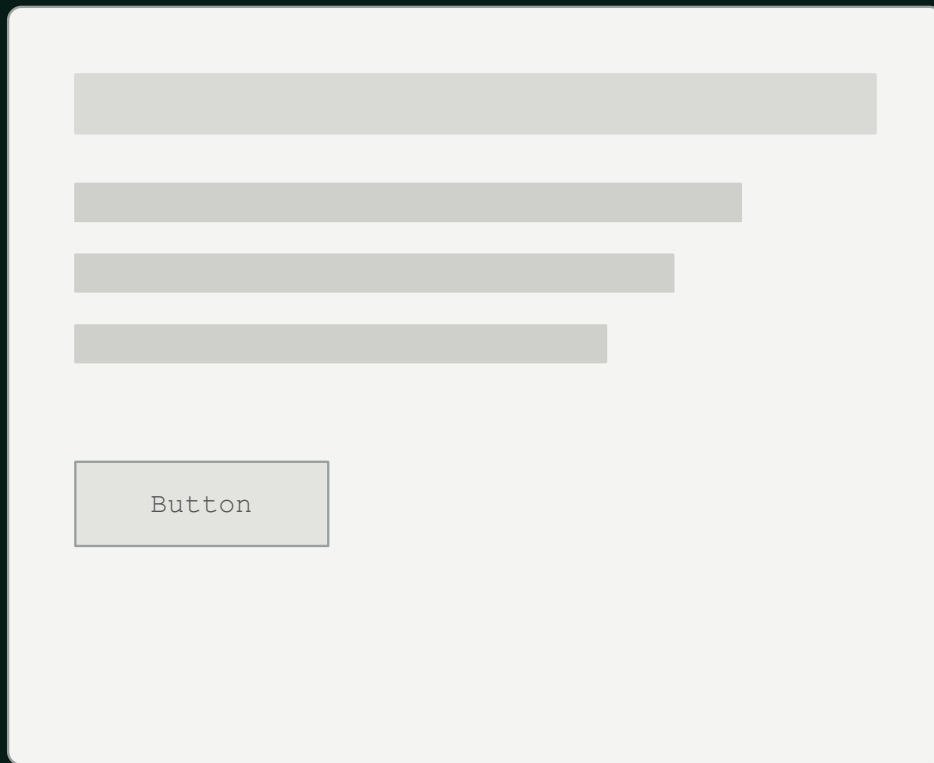

Spacing

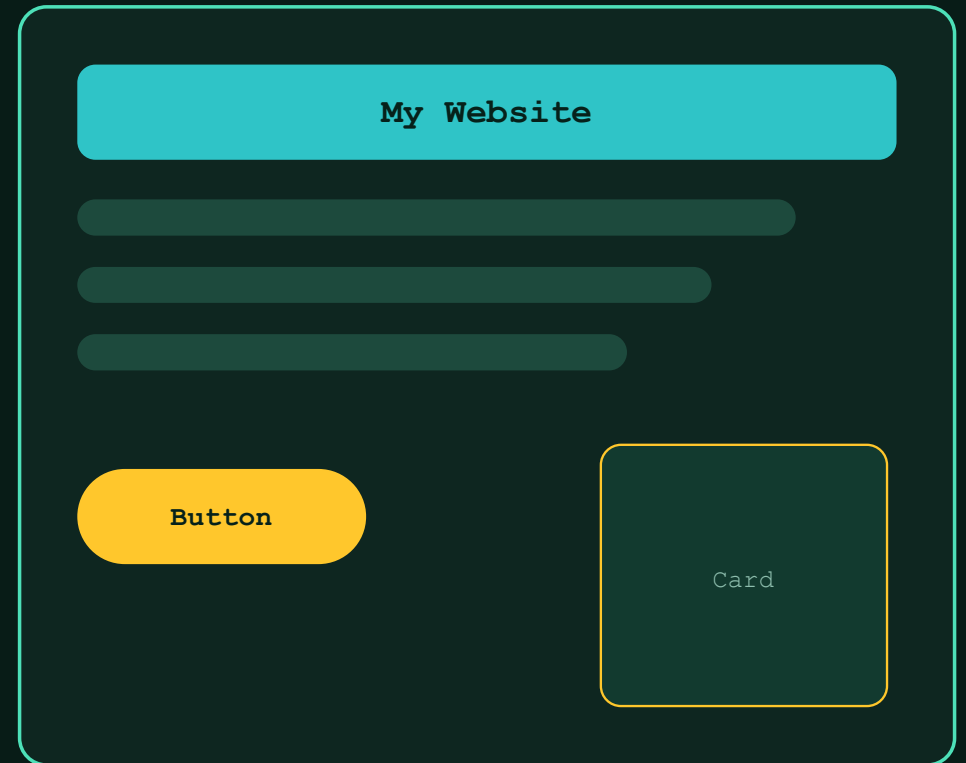

Element sizes

Seeing the Difference: HTML Alone vs. HTML + CSS

HTML without CSS

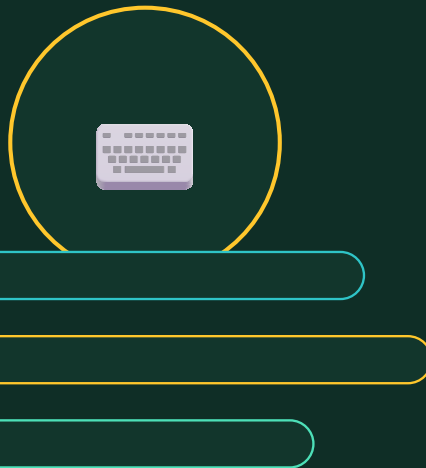

HTML + CSS

Time to Code! (Live Demo)

- Let's write some code together!
- We'll build something simple — a button or a card.
- We'll see the instant effect of CSS changes on HTML.

Live Demo — HTML + CSS

Before we wrap up.. let's hear from you

Audience interaction break

Question 1

What caught your attention the most today?

Question 2

If you designed your first page right now, what would be on it?

What did we do today?

- We understood the role of both HTML and CSS in building any website.
- We saw with our own eyes the real difference code makes to a page.
- Now we have a clear picture: what we did, and what's next.

Coming up tomorrow: How do we make this site "smart" and interactive? (JavaScript)
